

BROIGHTER NETWORKS

Your Broadband Partner...

Brighter Networks is a new specialist Broadband Service Provider for businesses in the greater Dublin area.

The company's mission is to solve the bandwidth bottleneck that exists between corporate networks (LANs) and the telecommunication links typically used to connect them to the Internet and to each other. Offering a low-priced, resilient, high-bandwidth service delivered over a fiber optic network, Brighter Networks is fundamentally changing the way broadband bandwidth is acquired and delivered in Ireland.

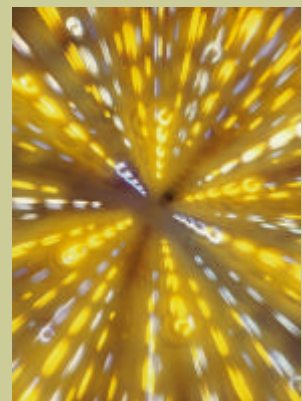

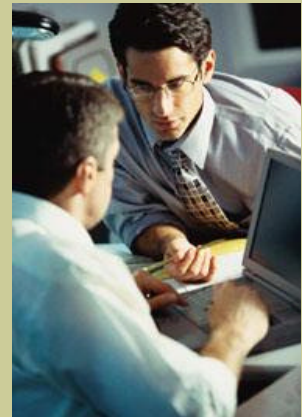

Our customers

Brighter Networks customers are small, medium and large enterprises, Internet Service Providers, Mobile Phone Operators, the Public Sector and carriers. All businesses who need more bandwidth for an affordable price in the Dublin area and are looking for a strong service provider partnership.

We are different

The best price per Mbit/s in the market, highest flexibility, fast service delivery and compelling service simplicity will enable Brighter Networks customers to fully partake in e-Ireland.

Existing telecommunications networks, which are built using legacy technologies, simply cannot provide the massive bandwidth required today, at the low price customers are asking for. Brighter Networks is legacy free and therefore able to focus on creating a technically advanced network which meets all our customers' current and future needs.
